Training for PGE

Training for PGE

On 11 December this year, a CAT ABW expert conducted a training course for PGE Polska Grupa Energetyczna S.A. employees.

The topic of the lecture concerned the broadly understood prevention of information threats. A characterisation of threats caused by state entities was made. In the context of issues related to information security, important issues from the point of view of security were exposed related to organised information collection operations and information attack mechanisms, as well as related dangerous contacts to which employees may be exposed while performing their duties at home and abroad.
