The use of artificial intelligence by terrorists

UNICRI on its website made available the developed report entitled *Algorithms and terrorism: malicious use of artificial intelligence for terrorist purposes*.

The report, developed jointly with the UN Interregional Institute for Crime and Justice Research, is intended to help against potential malicious uses and abuses of artificial intelligence by terrorists such as: new ways of physical attacks by drones, increased cyber attacks on critical infrastructure or the spread of hate speech and inciting violence on the Internet in a faster and more effective way.
